## FOREWORD

After the first National edition in 2016 and the International edition in 2019, this year we will organize the third edition of the hybrid Conference on Environment ,Risks & Health seminar in its Mediterranean version in 2024.

« Environment, Risks and Health » words whose meaning seems innocuous but, as research has progressed, the scientific community has discovered close relationships and interdependencies between the animal and plant kingdoms.

This balance evolves and adapts to natural conditions, so that according to environmental changes, some species disappear and others "fight" to survive, revealing a remarkable ability of the living world to adapt to the environment

This international conference does not pretend to give answers, the thematic is fabulously rich and complex, but will try, through the selected communications, to raise topics on the eco-toxicology of Algerian fauna and flora, on their diversity, their originality, the ecosystems in which they develop, the pollutants risks on human and animal health, chemistry and the environment, risk management, and finally support decision making.

If after these two days of communication and conferences ,will emerge awareness about the need to a scientific human means federation, for sustainable development, this symposium would have achieved its objectives.
